

## **EXSYMOL Official Partner of *OceanoScientific Expeditions***

**Monaco - Wednesday, January 19, 2022** - The Monegasque Company EXSYMOL, represented by its Chairman, Pierre Bondon, is committed alongside explorer navigator Yvan Griboval as part of the next *OceanoScientific Expeditions*. The dual purpose will be to safeguard the genetic heritage of marine organisms from coral reefs that have been little or not explored, in particular for the purposes of virtuous exploitation by biomimicry (copying Nature) for the benefit of Science, Health and Well-being; but also the mobilization of young people in their cycle of studies to make them aware of sea trades and to encourage them to RESPECT and LOVE the Ocean.

EXSYMOL, created in Monaco in 1972, is a "*Creator and producer of active ingredients*" which designs innovative and effective active solutions with a high naturalness index to offer products (ingredients) inspired by Nature, respectful of it, in more than forty countries. Its success with the largest cosmetics companies is based on understanding the needs of the skin and its ability to provide cosmetic solutions with pharmaceutical rigor. EXSYMOL's specialty is based on ingredients derived from a technology relating to bioactive silicon: Silanols.

Following the signature of this contract, Pierre Bondon declared: "*To be delighted to take part in this adventure. Beyond the strong personal attraction for the sea, I am convinced that the future will go through a better knowledge of the Ocean as well as increased respect for this environment essential to life on Earth. The missions of raising awareness of the protection of the Ocean, and research of scientific data of the OceanoScientific Expeditions correspond perfectly to the DNA of EXSYMOL.*"

Director of *OceanoScientific Expeditions* and President of the OceanoScientific associations, Yvan Griboval was delighted "*to take on board with us a Monegasque company which bases its activity and its development on active principles derived from Nature and in respect for it. Preserving the Ocean and its biodiversity for future generations means being able to virtuously marry Ecology and Economy, where Man is content with his rightful place in Nature, with humility. EXSYMOL is sincere in its societal and environmental commitments. We therefore are proud to have EXSYMOL by our side in these new philanthropic expeditions in the service of Science, for Humanity. See you at the end of March for a first campaign, departing from the Yacht Club of Monaco.*"

Photo caption: Both Members of the Yacht Club of Monaco, Pierre Bondon (on the left) and Yvan Griboval have chosen a salon of this prestigious Club, whose *OceanoScientific Explorers* flie the burgee, to officially contract.
